

## FORGEN 500 NT High Performance Micro Wind Turbines

**Forgen Renewables partner with SailTime to introduce an eco friendly sailing option to its client base.**

Leading innovative boat membership provider, SailTime, has partnered with Forgen Renewables in providing an eco friendly option of sail ownership. The companies have collaborated on the inclusion of a hybrid wind solar solution for the sole provision of power management to one of its fleet.

Sarah Collinson, Base Manager at Poole and Lymington comments "we are always seeking to provide options for our client base that meets their needs. We have seen a growing interest in environmentally sustainable power solutions and we are frequently asked about wind and solar. We see the interest levels only increasing and are please to be working with Forgen Renewables on such a solution. The low noise and vibration coupled with a safer solution to our recreational boat owners pushed us toward a vertical axis wind turbine solution over that of the horizontal type design"

She commented further "the Forgen wind turbine provides a trickles charge to the 12V domestic battery on board which powers the majority of the electronics and appliances including the navigation equipment, TV, microwave, fridge and heating. This eliminates the need for shore power so our Members can still us the appliances and not have to worry about draining the battery even when they are at anchor or out on a mooring"

### About Sailtime

SailTime offers an innovative new approach to sailing and boat membership that makes it easier, quicker and more economical for aspiring skippers to take the helm of a beautiful, well-equipped sail or powerboat. Founded in 2001, in Austin Texas, SailTime quickly grew to 40 bases in North America. European expansion began in 2004 with the first base in Hamble, UK and has since rapidly expanded to 15 European bases.

Since its early beginnings, SailTime has been providing fractional sailing on 30ft – 50ft sailing yachts.

### Benefits

- Much quieter in operation
- Much safer when operating in any wind speed
- Works in conjunction with solar panels
- A professional trickle charge device
